Aeon Co., Ltd.

Aeon receives the highest rating under the DBJ Environmental Rating program

Aeon received the highest rating under the Development Bank of Japan (DBJ) Environmental Rating program as a company that practices notably progressive green initiatives.

The DBJ Environmental Rating evaluates a company's level of sustainability management using its proprietary screening system (rating system), through which DBJ selects corporations with outstanding environment-friendly initiatives. This is our second time to receive the highest rating since February 2017.

Aeon has now obtained the highest rating* in all three rating programs offered by DBJ, namely, DBJ Environmental Ratings, DBJ BCM Ratings, and DBJ Health Management Ratings.

The rating was awarded in recognition of our following efforts, among other initiatives: Advanced sustainable management to achieve both a sustainable society and the Group's growth under "Aeon Sustainability principle"; development of Aeon Decarbonization Vision 2050 and setting an interim 2030 target for reducing CO² emissions certified by Science Based Targets (SBT) as well as working towards that goal, and analyzing the financial impact of climate change based on different scenarios (scenario analysis) following the recommendation by the Task Force on Climate-related Financial Disclosures (TCFD), and publishing their outcomes.

Aeon is committed to continuing to pursue both a sustainable society and the Group's growth as the everlasting innovative spirit under the Aeon Basic Principles of "Pursuing peace, respecting humanity, and contributing to local communities, always with the customer's point of view as its core" and drive forward sustainable management.

※ DBJ BCM Rating : Obtained in December 2017
DBJ Health Management Ratings : Obtained in November 2018
